Guidance Assumptions

- Our outlook for Avista Utilities assumes, among other variables, normal precipitation and temperatures for the remainder of the year
 and includes the expected impact from decoupling in Washington. Also, for Avista Utilities we are estimating that we will have a
 provision for earnings sharing for our Washington electric operations and our Idaho operations.
- For Avista Utilities we are expecting below normal hydroelectric generation for the third quarter and normal hydroelectric generation for the fourth quarter of the year. Due to the strong generation through April, we are expecting hydroelectric generation to be about 93% of normal for the full year. Due to significantly warmer weather and reduced heating loads in the first quarter of 2015, we expect a reduction to annual consolidated earnings of approximately \$0.08 per diluted share.
- Our outlook for AEL&P assumes, among other variables, normal precipitation, temperatures and hydroelectric generation for the remainder of the year.
- Our guidance range for Avista Utilities encompasses expected variability in power supply costs and the application of the ERM to that
 power supply cost variability.
- The midpoint of our guidance range for Avista Utilities does not include any benefit or expense under the ERM. In 2015 we expect to be in a benefit position under the ERM within the 90% customer/10% company sharing band, which is expected to add approximately \$0.06 per diluted share.
