Consolidated	\$1.86 - \$2.06

Guidance Assumptions

- Our outlook for Avista Utilities assumes, among other variables, normal precipitation and temperatures for the remainder of the year and includes the expected impact from decoupling in Washington. Also, for Avista Utilities we are expecting below normal hydroelectric generation for May through August and normal hydroelectric generation for the remainder of the year. Due to the strong generation through April, we are expecting above normal hydroelectric generation for the full year. Due to significantly warmer weather and reduced heating loads in the first quarter of 2015, we expect a reduction to Avista Utilities' annual earnings of approximately \$0.08.
- Our outlook for AEL&P assumes, among other variables, normal precipitation, temperatures and hydroelectric generation for the remainder of the year.
- Our guidance range for Avista Utilities encompasses expected variability in power supply costs and the application of the ERM to that power supply cost variability.
- The midpoint of our guidance range for Avista Utilities does not include any benefit or expense under the ERM. In 2015, we expect to be in a benefit position under the ERM within the 90% customer/10% company sharing band, which is expected to add \$0.06 to \$0.07 per share to Avista Utilities' earnings.
- Our earnings guidance range previously assumed we would repurchase 4 million shares of common stock through our 2014 stock repurchase program by the end of 2014. By not reaching the targeted level of repurchases and in turn not issuing any common stock during 2015 other than those under employee plans, we expect earnings dilution of approximately \$0.03 per share in 2015.
